

Colorbeam® roof beam

Boxspan® floor framing

Colorbeam® is the architectural version of the Boxspan® lightweight structural beam, which was launched by Spantec Systems in 1993. Boxspan® has since become a market leader in steel framing systems for residential floors and decks.

For further information on Colorbeam® structural roof beams and the Boxspan® steel flooring system, visit Spantec at [www.spantec.com.au](http://www.spantec.com.au)

# COLORBEAM

FOR HOME IMPROVEMENTS

COLORBEAM® IS PERFECT FOR ALL HOME IMPROVEMENT PROJECTS – COMBINING THE TRADITIONAL LOOK OF TIMBER BEAMS WITH THE STRENGTH AND DURABILITY OF STEEL

# COLORBEAM

FOR HOME IMPROVEMENTS

## LIGHT STRUCTURAL ROOF BEAM

The stronger, lighter, better-looking beam.

Colorbeam® structural roof beams from Spantec Systems give you the great looks of timber plus the strength and durability of steel – with the added advantage of a low maintenance finish.

The streamlined, rectangular profile of Colorbeam® closely resembles the shape of traditional timber beams. But unlike timber, Colorbeam® won't twist, warp or rot and doesn't need painting.

Colorbeam® is manufactured from two C-shaped sections of high-tensile steel, joined to form an extremely strong "box beam" that is also lightweight. The overlapping sections of the beam provide extra rigidity, allowing longer spans between supports.

Colorbeam® structural roof beams provide an ideal roof framing system for all home improvement applications, such as patios, carports and awnings. They are also widely used for institutional shade applications, such as covered walkways and lunch areas because of their durable, low-maintenance finish.

### CONNECTION BRACKETS

Colorbeam® comes with a comprehensive range of connection brackets.
