SPANTECTM

Boxspan - Floating Restaurant out of Steel

Boxspan

Strong, Straight, True to Size

Arbory Afloat, a pontoon style of floating restaurant in the beating heart of Melbourne CBD.

For this extension of the existing restaurant, Spantec was selected due to having the capability to meet the tight construction timelines with minimal onsite disruption, the need for an accurate, quick to erect, precision cut flooring system was key in maintaining a fast construction time.

The scope included an upper floor frame where our Boxspan product easily integrated into the structural steel framework and the upper deck frame which consisted of the full Boxspan kit system.

The exposed areas also required powder coating to match the Miami design requirements.

Spantec prepared a full set of construction drawings for the builders. The floor kit arrived at site pre-cut, all beams labelled with size, length and beam number relating back to the plans.

The time saving on this project was being able to deliver and start construction almost immediately.

Builder - The Melbourne Builder

Location - Melbourne VIC

Products - Boxspan 150x50 various gauges.

Size - 1312 l/m of product manufactured to length.

Key Benefits - No wastage, simple assembly, fast delivery.

Project Details

Project: Arbory Afloat
